

SOLID FOUNDATIONS

LITHIFY:

/lɒf/ : to change to stone : petrify; especially : to convert (unconsolidated sediment) into solid rock.

intransitive verb: to become changed into stone.

IT Security: to cut through the mire of conflicting advice and provide a solid foundation for business.

SECURITY IS OUR SOLE FOCUS

IT security shouldn't restrict, it should empower:

By providing a solid foundation, we enable business to be more innovative, more creative, more productive.

Lithify is a specialist security reseller. We provide complex IT Security solutions to the largest companies in the UK and worldwide. Our solutions are market-leading, delivered by experts with international reputations for excellence in their chosen fields.

We work with our clients on an ongoing basis to ensure that the investment made in IT security is utilised to the full and grows as the organisation evolves. We work in the most challenging environments to make security work for the business it serves.

Our reputation for troubleshooting and problem resolution is unparalleled.

Talk to us today about how we can help you reach your goals.

AIMS

- Make organisations much harder to target for hackers and other malicious agents
- Understand the risks and define actions to mitigate
- Provide a framework for all security decisions moving forward

OUR APPROACH

Everything we do is lead by consultancy. The solutions we devise and recommend are based on sound technical evaluation of your environment and working together to understand you, your team and the needs of your enterprise. There is no standard approach or a "cookie cutter" tick sheet. Whilst we have favoured technologies, no one vendor dominates our solution design and we expect each solution to be bespoke. Our solutions are requirements based rather than vendor-lead because we will not shoe-horn inappropriate technology into your network to hit a 3rd-party metric (e.g. to support a sales campaign).

In any of the project types below, our engagement begins with a consultation, discussion of the short and long term aims of your organisation and a proposal on how best to move

STRATEGY

When designing security strategy, we spend a considerable time working with the client to ensure that all areas of the business are considered. Strategy should provide a framework to support the aims of the business for at least the next 5 years, but also be flexible enough to cope with inevitable changes and additions as time goes by.

ARCHITECTURE

When architecting a network environment, we evaluate business need and recommend solutions based primarily on business requirement and future growth. Solutions must support the needs of the business, enable the creative freedom to allow the enterprise to innovate, and be flexible enough to grow as the enterprise develops.

REARCHITECTURE

When rearchitecting an existing network, we evaluate business need and map against existing tools and investments. Where assets can be reused, reoptimised or repurposed, they will be considered before any rip and replace strategy is recommended. Often, the addition of one or two key solutions can produce excellent results without the disruption caused by a wholesale replacement strategy.

PROJECT WORK

For a specific project, consultants consider the wider network, the business environment and the operational requirement ensuring that any recommended solution will be complimentary, and will enhance the array, rather than simply co-existing with other elements.

TROUBLESHOOTING

A network evaluation is the first step of any troubleshooting engagement. Once this is complete, a root and branch inspection of all solution elements will be undertaken. This methodical approach is key to our success in finding and resolving problems that others have failed to isolate.

OPTIMISATION

Solutions are often installed with base-level configurations, and not kept up to date. Our optimisation work helps you to use all available solution features and benefit from latest thinking to get the most from your investment.

OUR SERVICES

Providing competent, pragmatic installation of your chosen solution is second nature. Our extensive experience enables us to recommend and deploy complex configurations and provide thought leadership throughout our engagement

Our successful track record of providing security for cross-platform cloud solutions sets us apart from the average provider

Our reputation for providing consultancy on DCS and SCADA networks spans the globe

Security strategy is a key part of everything we do. We are confident in offering thought leadership as the basis of your long and medium term strategy decisions

Complex requirements can be daunting, but this is where our team shine. Our breadth of experience means that we have insight which is unavailable to a standard contractor. We are often required to provide configuration which pushes the boundaries of accepted norms and deliver business experience which enables your enterprise to get ahead of your competitors

Troubleshooting existing installations is a particular skill and we have an enviable track record in succeeding where others have failed. Solving existing problems is often less disruptive than a rip and replace strategy, and avoids costly future mistakes

Optimisation is in everything we do. We see too many installations performed badly or to base level config only. We ensure that your installation co-exists seamlessly with other network elements, is specific to your needs and really sings
